SHOP BLUEPRINT · 210 WOODLAND

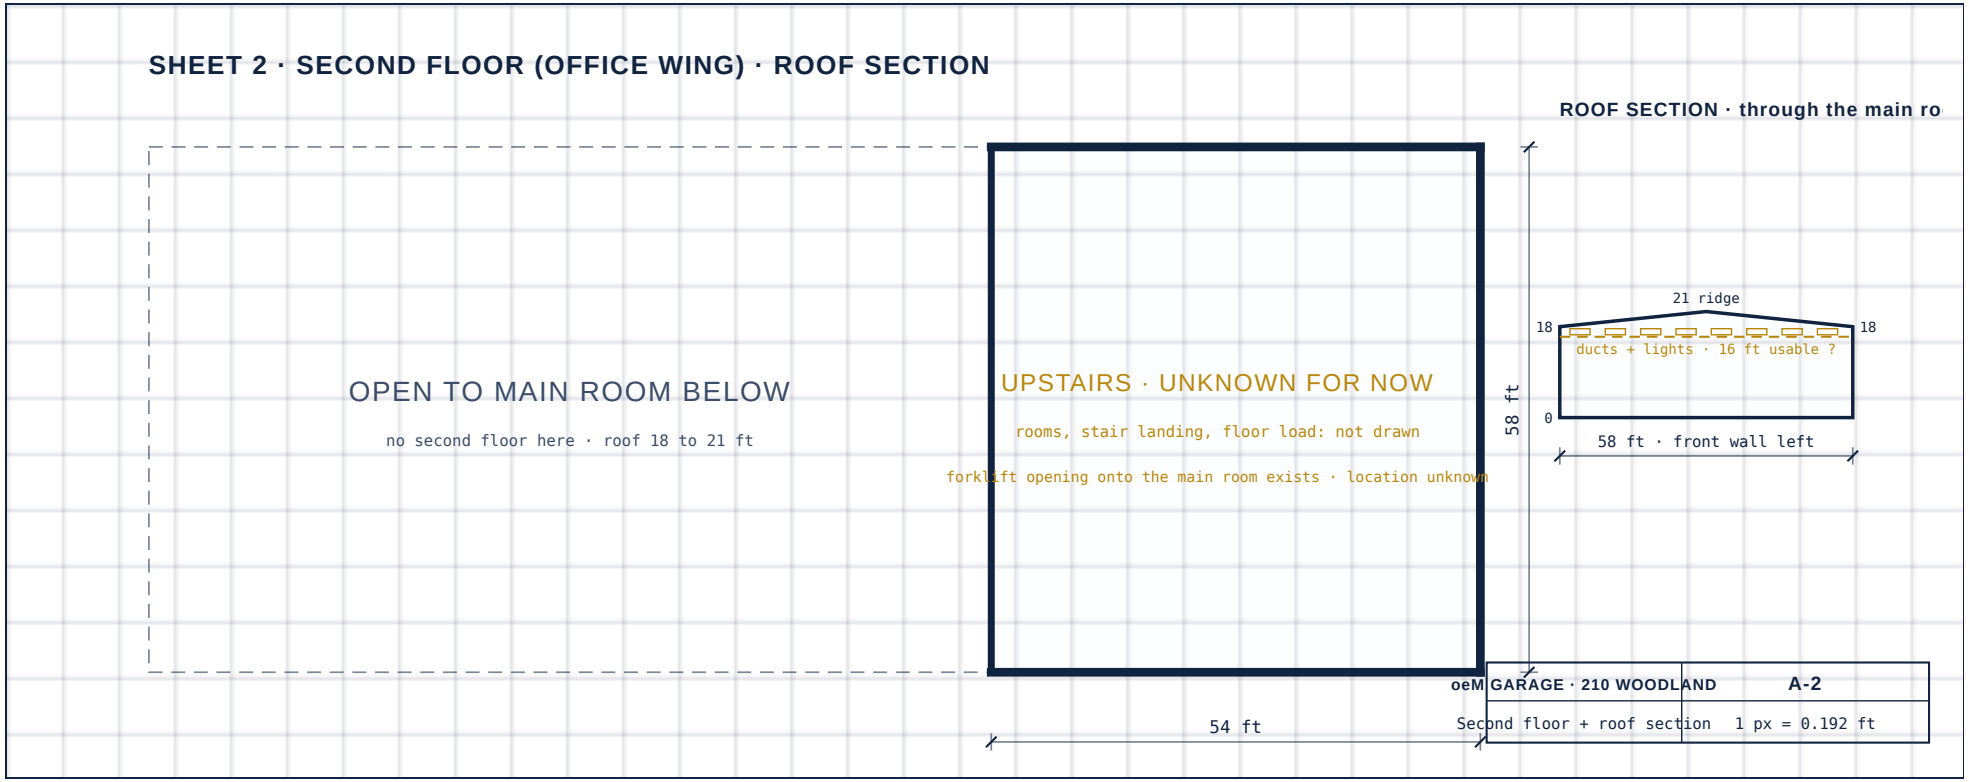

Last updated Oct 13, 2026, 8:40 AM ET · rev 7 · base drawing for markup · ? = my guess, correct it

Sheet 1, ground floor. Main room 93 × 58 ft measured by you. Wing 54 × 58 ft from your sketch numbers: 15 ft open strip, then 39 ft of rooms. Doors on the front wall as sketched.

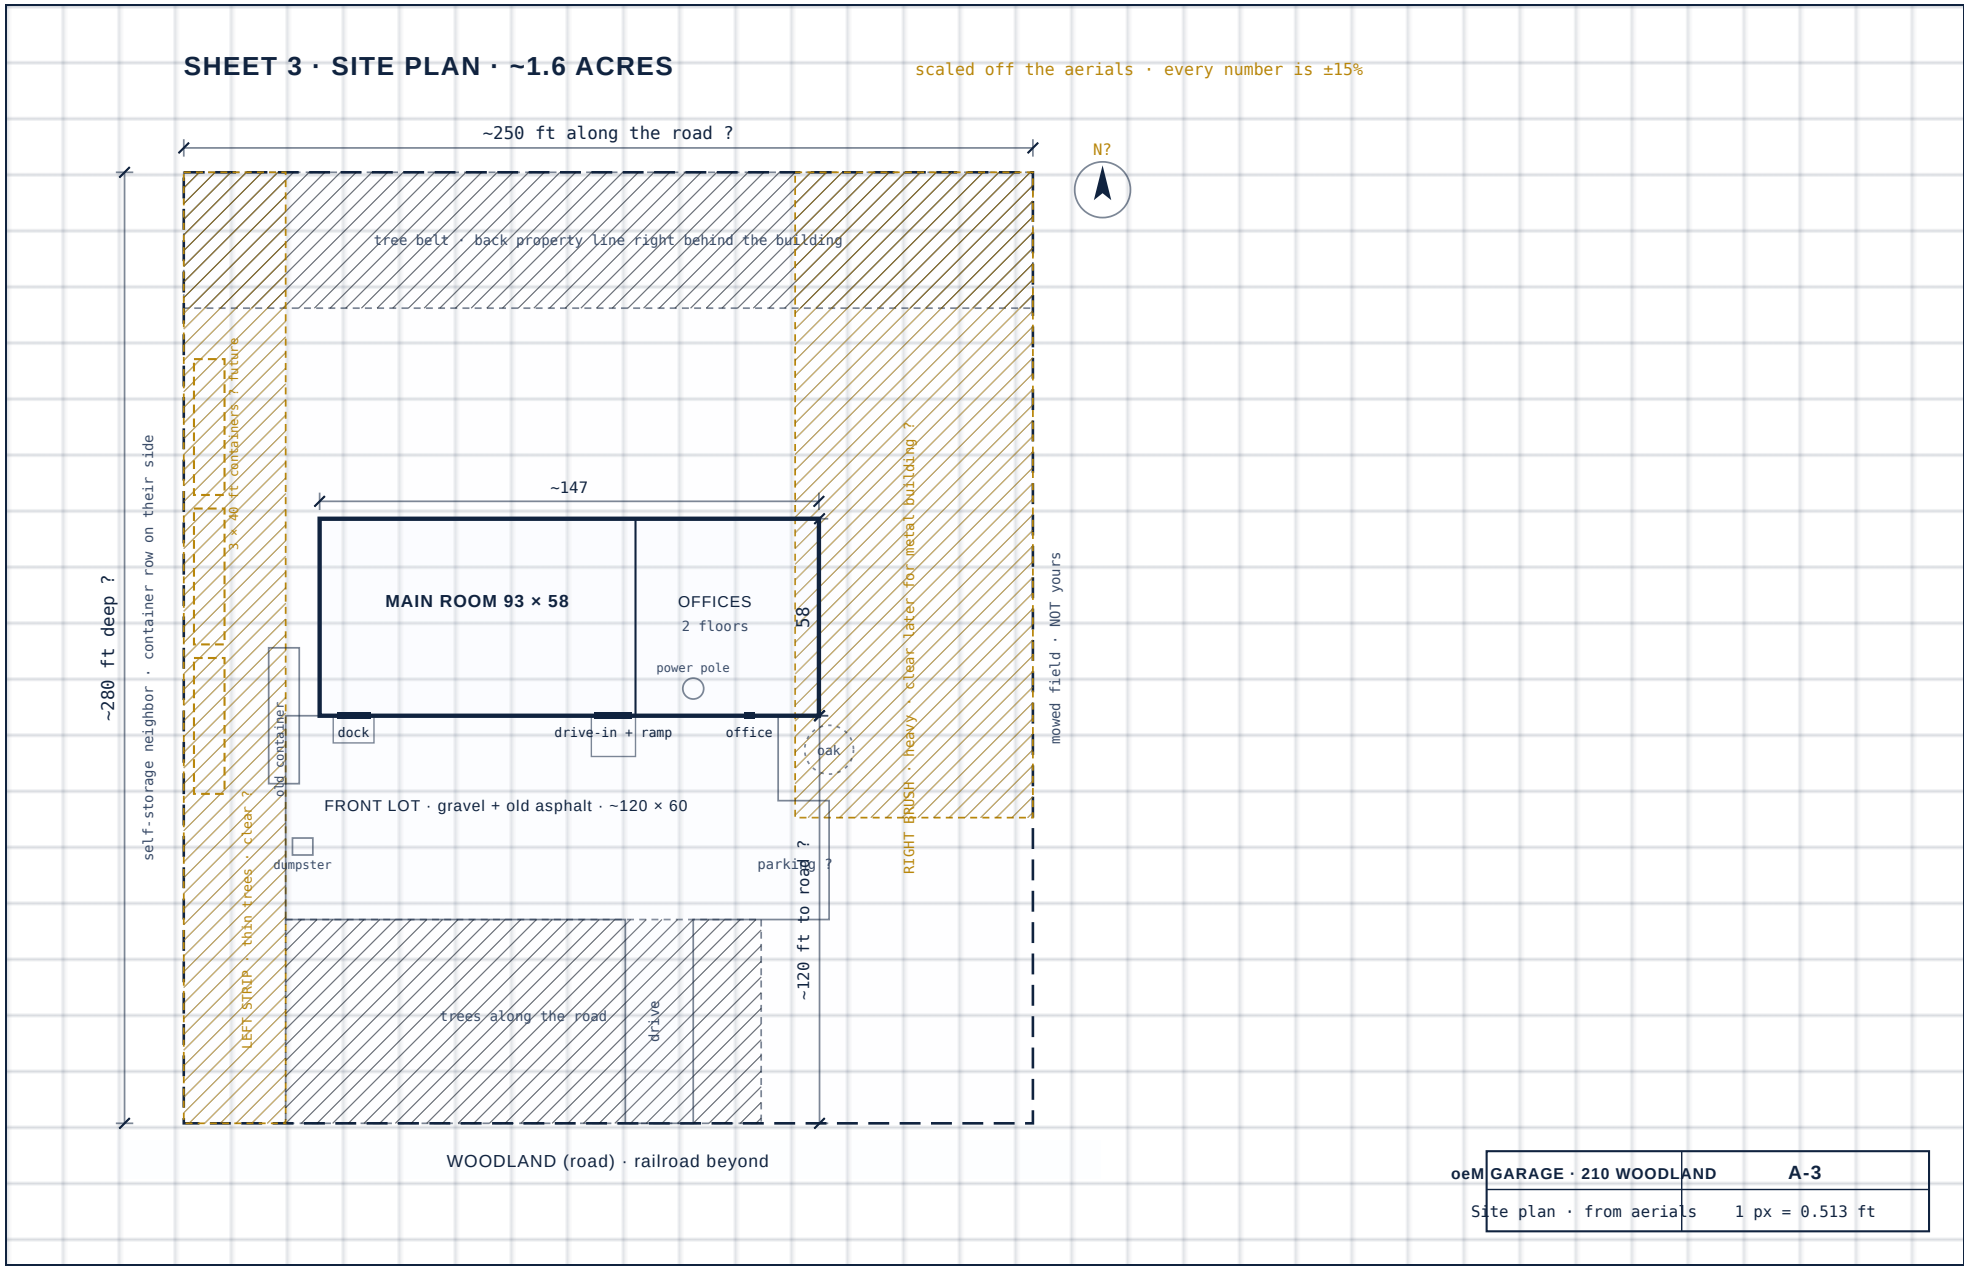

Wing drawn as planned, not as-is: one open 54 × 58 room after the walls come down. Bathroom stays. Stair 1 in a 15 × 14 room at the back, door on its right side. Stair 2 in a 6 ft room down the far right wall. Lobby at the front right with the street door. Two sets of double doors from the shop, one by the stair and one in the middle. Faint dashes are the walls being removed.

Wall thickness drawn at 8 in. Clear span assumed, no columns.

Sheet 2, second floor. Only the office wing has one. Left blank on purpose until you can see it. The forklift opening exists but its spot is unknown.

Roof section at the right: gable, 18 ft at the walls, 21 ft at the ridge, 16 ft usable under ducts and lights per you.

Sheet 3, site. Parcel about 250 ft along the road × 280 ft deep, scaled off the aerials against the 140 ft building. Treat every site dimension as ±15%.

Clearable strips hatched: left fence line (easy), right brush (harder). Back property line sits right behind the building.

WHAT TO MARK UP

1. Office wing length. I used 47 ft. Pace it or read it off the lease.
2. Office rooms, stair position, and which door connects the wing to the main room, with its width.
3. Second-floor opening: where on the shared wall, how wide, how tall, gate or rail.
4. Anything on the back and left walls of the main room: panels, drains, columns, windows.
5. Front lot edges and where the old container and pallets sit.
